LED Lighting

Brand History

Blaupunkt is a brand with a rich tradition. The company, which has been on the market since 1924, initially operated under the name of "Ideal", producing headphones. The name under which the brand operates today refers to the blue point which marked the symbol of product quality. The brand was part of the world-famous Bosch concern for over 60 years, and after that period it became permanently associated with the Aurelius concern.

The brand's activity from the beginning of its existence has resulted in many technical inventions shaping its present position. Blaupunkt is responsible, inter alia, for the audio system functioning in modern cars. On these foundations, the brand has built a wide range of electronic devices. Following contemporary trends, Blaupunkt creates appliances from various fields. The brand's offer includes LCD and LED TV sets, alarm systems, household appliances, car accessories, air conditioning, tablets and even electric scooters. The lighting industry is the area where the brand has emerged in the last years of its activity.

Quality and Warranty

Taking care of the satisfaction of our customers and business partners, we use the highest quality materials, electrical equipment and light-emitting diodes from global brands in the production of our lamps. Before our projects go on sale, they undergo rigorous work tests. We make them both in our branches and in cooperation with the German research center TUV. We also make sure that they have confirmed CE and RoHS certificates. Thanks to these activities, we are 100% sure that the offered product is safe and meets photometric and photobiological standards. Our ambition is the highest possible durability, reliability and lifetime of the supplied light sources

ESCO

The main purpose of replacing lighting with the ESCO program is to save electricity. To maximize it, you need to choose the right lighting that generates the lowest possible costs. The Greenie brand involved in the ESCO program has created its own distribution department for the highly efficient Blaupunkt brand, whose products are available under the program without costly replacement of lighting.

Making a quick investment without spending large amounts in a short time

A full range of services, from needs analysis to assembly

Up to 70% reduction in electricity consumption

Repayment only from savings achieved

End of the repayment period well before the end of the warranty period

100% savings on the customer's side after the last repayment

Transfer of investment risk to the service provider (Greenie Polska)

Enjoy it.

Services; Projects; Lighting replacement.

When choosing representatives of the Blaupunkt brand, you can count on an individual and professional approach to each project. Our first step is always to make a careful local vision at the investment site indicated by the client. We are distinguished by detailed documentation, among others the number of luminaires, old light sources, their total power and other activities that will allow the selection of energy-saving LED luminaires in the next stage of work. Our credo is maximum customer satisfaction. We make every effort to make the expectations more realistic, but also to meet the necessary lighting standards for a given place. For this, we carefully plan the building. We take into account, among others layout of all rooms, length of walls, height of ceilings. However, collecting reliable data is not enough. In order to fully satisfy our customers, we create a virtual equivalent in Dialux, which allows you to see the effect before mounting the lamps. Moreover, we estimate the savings on the investment. Thanks to this, you get a guarantee that the cost of the project will pay off quickly. Comprehensive service for Blaupunkt representatives also includes care for the completion of all procedures. After completing the formalities, we send professional fitters to the investment site, who perform the agreed lighting modernization.
